ABOUT ME

Industrial Engineer with an analytical mindset and a focus on process optimization, interested in automation, project management, and design. I have knowledge of digital marketing and web traffic fundamentals, applied to process analysis and improvement. Throughout my experience, I have strengthened my skills in leadership, teamwork, and effective communication.

EXPERIENCE

Documental Manager 2025

- Design and management of an internal web platform focused on optimizing document management and centralizing information.
- Implementation of a support chatbot using automation and artificial intelligence to streamline document searches and inquiries.
- Development of operational and financial dashboards for monitoring KPIs, process analysis, and data-driven decision-making.
- Optimization of information flows and improvement of document accessibility to enhance organizational efficiency.

Web Manager 2024

- Development of interactive web platforms for visualizing and standardizing project progress, facilitating real-time access to and analysis of information.
- Creation and management of an internal e-commerce platform for the promotion, commercialization, and electronic invoicing of products.
- Implementation of basic digital marketing strategies and user experience optimization to improve web traffic and user engagement.
- Development of AI-powered tools in Streamlit for automated resume analysis using Natural Language Processing (NLP).
- Monitoring and optimization of web performance with a focus on scalability and traffic growth.

Academic Coordinator 2024

- Strategic design of training content aligned with internal learning and development needs.
- Logistical and operational coordination of training programs, ensuring an efficient experience for participants and facilitators.
- Analysis of metrics and user feedback to support the continuous improvement of training processes.
- Implementation of digital tools for tracking, automation, and communication of academic and training activities.

Project Sub-manager 2023

- Comprehensive project management and follow-up using agile methodologies, ensuring the achievement of objectives, timelines, and resource allocation.
- Supervision of traceability and activity monitoring to optimize execution and results control.
- Coordination of resources and operational support for multidisciplinary teams in innovation projects.
- Preparation of reports and performance analysis to support strategic decision-making.
